

LUXAR ASSET Whitepaper

1. Introduction – The LUXAR Vision & Philosophy

In a world saturated with billions of tokens and endless promises, most projects exist only for short-term hype. LUXAR stands apart as a stable, non-manipulable, and fully transparent digital asset.

The total supply is strictly capped at **50,000 LUXAR**, with no possibility of additional minting. Liquidity is secured through permanent **LP burn**, while the development fund is locked for **10 years**, and the underground reserve is locked for **100 years**. This structure is designed to eliminate speculative risks and provide long-term stability.

LUXAR carries no promises of staking, airdrops, or roadmaps. It exists for a single purpose: to be a resilient, long-term digital reserve.

Everything is governed by code; there is no room for central management or subjective decisions.

LUXAR remains a “**Digital Stone**” — an asset that promises nothing but true scarcity and transparency.

2. Protocol Essence

LUXAR is developed as a Polygon ERC-20 token. It is independent of central entities and operates on autonomous code. The system does not rely on future promises or roadmaps; its existence is guaranteed by immutable smart-contract mechanisms on the Polygon blockchain.

3. Tokenomics & Distribution

The total supply is fixed at **50,000 LUXAR**, and increasing this amount is technically impossible.

- **Circulating Supply (30,000 LUXAR):** Released on the QuickSwap decentralized exchange to provide market liquidity. LP tokens have been permanently burned.

- **Century (Underground) Reserve – 10,000 LUXAR:** Locked for 100 years. This fund is inaccessible during this period.
- **Development (Dev) Reserve – 10,000 LUXAR:** Locked for 10 years. There is no partial release or emission mechanism during this lock period.

Note: Due to the initial liquidity depth, temporary purchase and holding limits are applied to prevent extreme market volatility.

4. Anti-Monopoly & Governance Limitations

- **Maximum Buy Limit:** 50 LUXAR (Temporary)
- **Maximum Holding Limit:** 100 LUXAR (Temporary)

Governance rights over these limits currently remain with the contract owner; however, no other powers (such as minting or breaking locks) exist. Once limits are disabled or ownership is renounced, the system will become entirely autonomous.

5. Liquidity & Freedom of Exit

There are no limits on sell transactions. All holders are free to exit the system at any time based on market conditions.

6. Inflation & Incentive Policy

- No Staking
- No Airdrops
- No New Emissions
- No Profit Guarantees LUXAR operates solely on a fixed and immutable supply model.

7. Technical Specifications

- **Fixed Supply:** 50,000 LUXAR (No mint function).
- **100-Year Underground Reserve:** Fully locked.
- **10-Year Dev Reserve:** Fully locked.
- **Burned LP:** Liquidity provider tokens are destroyed. All lock and LP operations can be verified on-chain.

8. Risk Disclosure

LUXAR is an experimental digital asset. The smart contract has not undergone an official third-party audit. As with any software, technical errors or unforeseen vulnerabilities may theoretically exist. These are not intentional features but general risks inherent to software development.

Cryptocurrency markets are highly volatile. LUXAR is not an investment contract or a guarantee of profit. Participants must make independent decisions.

9. Governance & Renouncement

Currently, the contract owner has not yet renounced ownership and retains the right to manage temporary limits. Once ownership is renounced, the system will become fully independent and unchangeable.

10. On-Chain Verification

- **Contract Address:**
0x00
- **LP Burn Tx:** Available on the official website.
- **100-Year Reserve Lock:** Available on the official website.
- **10-Year Dev Lock:** Available on the official website. All transactions are publicly verifiable on the Polygon blockchain.
